I have been using the C++ compiler from the GNU's distribution, and as you know, C and C++ are not the same language. I would like to learn how to write console applications in C++. I would like to create GUIs for Windows, Linux, and Mac OSX. I would like to know if there is a compiler or a library for GUI development in C++, and if so, what is it and how do I use it? EDIT: By "compiler", I mean GCC, Clang, or any other compiler that is capable of compiling C++ programs into binary objects that can run on the target

operating system. Also, I do not mean a scripting language, such as Python, Perl, or Ruby. A: The idea of GUI in C++ is certainly possible. And yes, you can use X Windows as the GUI.
